

part:

- . 2 lense cover, part#34262-TL0-305 (order from my local dealer is cheaper than order online and pay \$\$\$ for shipping).
- . 2 T10 sockets (you can find them @local auto part store, or from here : <http://www.superbrightleds.com/morei...FWpyQgodCAsAfw>)
- . 194 light bulb (more on this later)
- . add-a-circuit (2A and 20A)

I could not tell which wire is the dome (-) around the fuse box, so I decide to tap to the door switch for (-).

installation:

- . open the inner trim of the B-pillar (see PIC-4)
- . remove the door switch make it easier to tap into the wire. This will be your (-) wire to your light.
- . run that wire back to the fuse box area (I run it under the door silk trim)
- . tap into the power-lock fuse (because we want constant power)
- . wire up your light and test to make sure the light turn on when you open the door (and shut off when you close the door). then disconnect your add-a-circuit.
- . remove your door panel, and remove your speaker.
- . run both wires to your door. I make a needle out of a coat hanger so I can poke through the rubber thingy (PIC-1)
- . while you have the door panel out, try to fit the socket to the opening. I use hot glue on the back, then some black tape to secure it (door\_panel.jpg).
- . tidy up your wires, and do the final test. If it still works, then put everything together, then start on the other door.

NOTE: the 5-SMD LED does not fit. I have to use those original 194 bulb from the map light. Suppose if you have the right socket, or a low-profile LED then it should fit.

**Sport DIY interior lighting**

This is awesome  
I'll do the glovebox light sometime soon  
Already have the [courtesy light](#) 😊  
Good diy!
